

MALTEGO AND CYBERSIXGILL

Catch more threats before they become incidents with exclusive access to underground sources as well as malicious indicators of compromise (IOCs) based on the most comprehensive, automated collection from the deep, dark, and surface web.

Technology Overview

Cybersixgill

Powered by the broadest, automated collection from the deep, dark, and clear web, Cybersixgill delivers contextual threat intelligence in real-time that is highly accurate, comprehensive, and covert. By enriching IOCs—including domains, URLs, hashes, IP addresses, as well as actors and post IDs—users can gain important context and essential explanations to connect the dots and take the right action. Users also receive actionable insights to effectively mitigate threats, level up threat hunting and better understand malware TTPs and trends.

Maltego

Maltego is a comprehensive tool for graphical link analyses that offers real-time data mining and information gathering, as well as the representation of this information on a node-based graph, making patterns and multiple order connections between said information easily identifiable. With Maltego, you can easily mine data from dispersed sources, automatically merge matching information in one graph, and visually map it to explore your data landscape. Maltego offers the ability to easily connect data and functionalities from diverse sources using Transforms. Via the Transform Hub, you can connect data from over 30 data partners like Cybersixgill, a variety of open source intelligence (OSINT) as well as your own data. Our different Desktop Client editions, data sources, and deployment options enable you to tailor Maltego to your specific needs in terms of data access, functionalities, and security requirements.

Integration Use Cases

- Cyber incidents prevention, detection, and incident response
- Brand protection
- Deep and dark web investigations
- Phishing detection
- Data leaks
- Third-party monitoring
- Fraud management (root-cause analysis)
- Enrich endpoint protection (IOCs)
- Terror investigations
- Detect zero-day malware

Integration Benefits

By integrating Cybersixgill's algorithm and data with Maltego, users harness an unparalleled collection from the deep, dark web, to elevate Maltego's graphical link analysis. Cybersecurity teams including threat intel, SOC analysts and incident response teams will be able to accelerate their investigations, obtain a visual understanding of the threat landscape, and gain crucial actionable insights. Cybersixgill enables you to:

- Receive early warnings of new threats as they develop on the dark web, before they are deployed in the wild
- Conduct deep analysis of malware available for download on the deep and dark web

How to Access Cybersixgill Data in Maltego

Enterprise Data Allowance

Maltego Enterprise users can directly install the Cybersixgill Hub item and run 10 Cybersixgill Transforms per month.

Bring Your Own Key

If you are an existing Cybersixgill customer, reach out to your contact person at Cybersixgill to gain access to the Hub item. If you are not yet a Cybersixgill customer but want to access the full solution, please [reach out to Maltego](#).

Data Bundles

Purchase a Maltego [Cybersixgill data bundle](#) in our web-shop on a flexible subscription.

Medium 250 Transform Runs / Month \$3,000 / Year	Large 500 Transform Runs / Month \$6,000 / Year	Enterprise Contact Maltego to learn more about our Enterprise data bundle offering!

About Cybersixgill

Cybersixgill is a fully automated threat intelligence solution that helps organizations protect their critical assets, reduce fraud and data breaches, protect their brand, and minimize attack surface. The Cybersixgill Investigative Portal empowers security teams with contextual and actionable data as well as the ability to conduct covert investigations in real-time. Rich intelligence streams such as Darkfeed and CVE insights from DVE Score harness Cybersixgill's unmatched intelligence collection capabilities and deliver real-time intel to organizations and help proactively prevent threats. Current customers include enterprises, financial services, MSSPs, government and law enforcement entities.
